Calculation of municipal waste Recycling Rate for the purposes of the Recycling Target: Tons waste separately collected (a) – (tons recycled (b) + (c)) = Losses

Tons municipal waste generated - Tons waste separately collected (a) – losses (from sorting, reuse, WtE, disposal) = **TOTAL RECYCLED (in tons)**

For a %age recycling rate: **TOTAL RECYCLED (in tons) / Tons municipal waste generated / x 100 = RECYCLING RATE**
 e.g. 110 000 tons recycled / 220 000 tons generated = 50% recycling rate
