Notification according to the Espoo Convention on an Environmental Impact Assessment for the offshore wind farm Windanker, northeast of Rügen, Germany

The Swedish Energy Agency has by a communication dated 2013-06-23 been informed that Iberdola Renewables Offshore Deutschland Zwei GmbH has compiled consultation documents as a part of the procedure of preparing an Environmental Impact Assessment for the offshore wind farm Windanker northeast of Rügen. The area for the wind farm is located along the German economic zone that is adjacent to Denmark's economic zone around Bornholm. The distance to the Swedish economic zone at its closest point is 4 km.

The Swedish Energy Agency has no comments on the consultation documents. However, as the expert authority on wind power in Sweden we are anxious to follow the development of wind power in the near area of Sweden's territorial waters. Therefore we are interested in continuing to participate in the Environmental Impact Assessment procedure for Windanker Wind farm.
