## Regarding the notification of the Windanker offshore windfarm in the German exclusive economic zone in the Baltic Sea

Swedish Transport Agency has taken note of the documents presented by Naturvårdsverket regarding the German notification of the Windanker offshore windfarm in German Exclusive Economic Zone (EEZ) of the Baltic Sea. The notification is according to the Espoo convention.

The planned zone designated for 60 wind turbines on the German EEZ in the Baltic Sea is covering an area north east of the island Rugen and borders to Danish EEZ. The zone is located approximately 4 km from Swedish EEZ.

Swedish Transport Agency has no objection to the documents and our view is that we do not need to participate further in the environmental review process.

---

This matter has been determined by Carl Göran Rosén, deputy of the section for maritime traffic and aerodromes, and done in participation with nautical adviser Sebastian Irons, the latter reporting.
